Measuring Effectiveness - A User Survey Part 1

We'll assess effectiveness using two criteria:

1. **Layout Correctness**: Are the elements aligned perfectly? positioned correctly? (e.g., any overlapping of elements, getting out of the container/screen or more at the corner, distortion)
2. **Aesthetic Quality**: How visually appealing is the layout? (If two versions of a webpage contains any mismatch, only check that segment for aesthetics)

For each webpage, we present two images side by side—the left shows the **Version 1** state, and the right shows the **Version 2** state. Participants will vote on each version according to both metrics.

If confusion occurs, one can check the **Reference Image:** representing the default layout and aesthetics for the webpage
